Sink Doctor

FIRECLAY SINK CARE

CRESTWOOD FIRECLAY FARM SINKS

EVERY DAY:

- Wash with mild dish soap or detergent and warm water, using a soft cloth
- Rinse thoroughly, then dry with a soft, dry cloth

TOUGHER STAINS:

- Use a 50/50 solution of water and bleach, or a non-abrasive cleaner
- Rinse thoroughly, then dry with a soft, dry cloth
- If a metal pot or pan leaves a mark, use a cleaner such as Astonish Cleaner™

PROTECT YOUR SINK:

- Do not place hot pots or pans directly on the sink surface
- Always run cold water when pouring boiling water into the sink

PLEASE AVOID:

- Harsh abrasives or caustic cleaners containing ammonia or alkalis
- Steel wool, scouring pads or abrasive powder
- Paint removers, oven cleaners or other aggressive chemical solutions

GOOD TO KNOW:

- Fireclay is fired at 2,200°F, about twice the temperature used for cast iron sinks. The result is a durable surface that resists scratches, chips, alkalis and acids
- No sink is impervious to damage, but fireclay resists chips, scratches and stains better than most materials
- In the rare event of a chip, fireclay repair kits are available online

SUPPORTING PRODUCTS:

- Mild dish soap or detergent for everyday dirt and stains
- A 50/50 solution of water and bleach for more difficult stains
- Astonish Cleaner™ for stubborn marks from pots or pans
- Fireclay repair kits, in the rare event of a chip
