QUARTZ SINK CARE

LEXICON QUARTZ COMPOSITE SINKS

CLEANING:

- Clean regularly with a non-abrasive sponge and dishwashing soap
- Rinse and dry completely with a clean, soft cloth

SURFACE LUSTER:

- Clean, rinse and dry the sink completely
- Wipe a thin, even coat of Quartz Sink Conditioner, food-safe mineral oil or olive oil over the whole sink
- Remove the excess, or leave it overnight
- Reapply as needed

SCUFFS & STAINS:

- Magic eraser sponge for light scuffs, stains and metallic marks
- Stubborn spots: soft scouring pad with a mild cleaner such as Soft Scrub or Bar Keeper's Friend
- Then clean, rinse, dry and condition

HARD WATER & LIME:

- Use Lime Away or CLR
- Or lay a paper towel soaked in white vinegar on the area and rinse after 20 minutes

GOOD TO KNOW:

- Quartz is durable, but no sink is scratch-proof. Take care with heavy objects and ceramicware
- A stainless steel bottom grid protects the surface
- Metal marks come from utensils and pans rubbing the hard surface. They are cosmetic, show most on light colors and wipe away with a magic eraser sponge

PLEASE AVOID:

- Abrasive cleaners and abrasive or metal scouring pads
- Bleach and alkaline cleaners such as ammonia
- Cleaning paint or grout in the sink
- Leaving dyes and juices on the surface

Color-matched disposal flange? Remove it now and then and clean it with soap and a non-abrasive sponge.
